Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Dear Sir/ Madame:

It has come to my attention that NASA has not fulfilled it's contract with the state of California to clean up it's toxic mess at the Santa Susana Field Laboratory. Please fulfill your contract and return the area to it's previous uncontaminated, unpolluted state. You are under contract to do so, and any effort on your part to leave the area as contaminated and polluted as it is would be highly unethical on your part.

Sincerely
Ben Gaffin

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

I live in this area and you can draw a circle around this test sight, and within that circle, the cancer rates are soaring. It is shameful and criminal that NASA would allow this contamination to go on for so many years without cleaning it up.

Blessings to all those who have suffered from cancers and lost loved ones from this toxic residue, and let's hope that our voices are heard and NASA finally takes responsibility for clean up that should have happened way back in 1959. Pretty sad it's gone on this many years.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's poor environmental practices resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. I strongly urge NASA to completely live up to its obligations, and carry out in full the thorough cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.

Dear Mr. Elliot

Over many decades, NASA's environmental practices reportedly resulted in widespread contamination of the Santa Susana Field Laboratory near Los Angeles. Dioxins, perchlorate, trichloroethylene, heavy metals, Polychlorinated biphenyls (PCBs), and other hazardous materials allegedly pollute the soil and groundwater at the site, and some have migrated offsite. In 2010, NASA entered into a legally binding agreement with the state of California to clean up all the contamination that could be found.

Now, NASA has published a Draft Environmental Impact Statement for the cleanup that suggests they may be trying to break its commitment. As someone who lives in Los Angeles County, I request that NASA live up to its obligations, and carry out the full cleanup required by the 2010 agreement. NASA contaminated the site; NASA promised to clean it up completely; NASA should be true to its word.
