Mr. Allen Elliott – SSFL Project Director
NASA MSFC ASO Building 4494
Huntsville, AL 35812

RE: Comment on the NASA DEIS

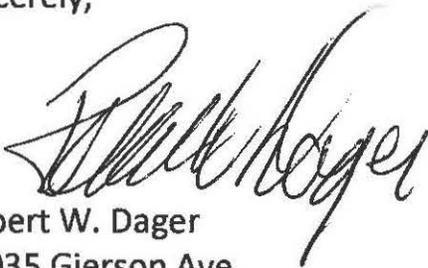

Dear Mr. Elliott:

The transport past our schools and residences of enormous amounts of contaminated soil requires more attention to the health and safety hazards to our community from the accidental release of dust particles containing chemical pollutants and the ever-present Valley Fever spores.

The unavoidable contaminants in the diesel exhaust that will be passing by our local elementary school every 3 minutes, 8 hours a day, for 3 years are maybe worse than the contaminants the trucks are carrying.

The addition of hundreds of thousands of truck trips on our local streets is a safety hazard to all residents.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert W. Dager". The signature is fluid and cursive, with a large initial "R" and "D".
